

Mykyta Kashcheiev

Frontend Developer (React / Next.js)

React/Next.js developer with 3+ years of commercial experience. Focused on building clean, maintainable UI with TypeScript, component-driven architecture, and thoughtful state management. Comfortable working in cross-functional teams with designers, backend engineers, and product managers. Keen on writing readable code and continuously improving both the product and my own skills.

Employment History

Espeo Software

November 2025 - January 2026.

React Developer (2 month contract)

Developed authentication and user management UI using React and TypeScript with AWS Cognito, supporting role-based access control across multiple locales. Built reusable form components and managed application state with Zustand for an internal admin panel. Presented architecture decisions to the team and stakeholders during sprint demos.

React SCSS AWS Cognito Zustand

Stera Global

August 2023 - November 2025

Frontend Developer

Built and maintained React + TypeScript web applications for B2B clients. Translated Figma designs into responsive, pixel-perfect components. Integrated third-party APIs (HubSpot, analytics tools) and built dynamic forms handling validation, multi-step flows, and data submission. Worked on page performance: optimized images, lazy loading, code splitting - noticeably improved load times on key pages. Collaborated with designers and backend developers in Agile sprints: daily standups, sprint planning, retrospectives, and code reviews.

React Next.js Tailwind CSS SEO REST API Hubspot API

Upwork / Direct clients

January 2021 - Present

Frontend Developer (Freelance)

Built responsive, pixel-perfect websites for startups and small businesses. Translate Figma/PSD designs into clean, semantic HTML, CSS/SCSS, and JavaScript. Used Tailwind for rapid utility-first styling and GSAP for polished interactive animations. Handled the full project cycle independently: clarify requirements with clients, estimate scope, develop, test across devices, and deliver production-ready code.

Projects

UGC Creator Media-Kit SaaS

Next.js Developer

Built and extended reusable Next.js components for a creator dashboard - media-kit views, profile cards, and analytics widgets with Framer Motion animations. Connected Instagram analytics API: fetched followers, engagement, and demographics data and displayed them in stat cards with loading, error, and empty states handled. Wrote unit tests for key UI components using Jest. Developed the marketing website with SSR, responsive layout, and basic SEO setup.

Next.js Tailwind CSS Framer Motion

Productivity SaaS

React Developer

Implemented new feature modules: interactive visual editor (canvas-based), task boards with drag-and-drop, and a content suggestion sidebar. Created a small shared component library with consistent styling tokens used across several app sections. Managed complex component state with Redux and custom hooks; connected features to REST API endpoints.
